

AT-6666PRO - firmware changelog

V1.01 (QX6666P_H_V101_20240920)

- Add MEMORY copy to VFO feature. (Press BAND while in MEM mode to copy the frequency and settings to VFO (uF) mode).
- Stop the overwriting of saved MEMORY channels. (Changes to saved MEMORY channels are temporary).
- Add TXCOLOR menu item. (Allows setting of a different LCD backlight color in TX mode).
- Add SCAN to the PF.KEY selection list.
- Add CW.RX menu item. (Allows setting of CW-U (USB) and CW-L (LSB) modes).
- Add CW.BKIN menu item. (Allows setting of the CW break-in delay from 0-1000ms).
- Add CW.SHIF menu item. (Setting "ON" will shift/offset the RX frequency in CW mode to the value set in the CW.FREQ menu. This will set the CW RX tone and CW TX sidetone to the same frequency, automatically).
- Add support for the PC Alignment (service mode) software tool.
- Add Firmware Version menu item (VER.xxx).
