

## Readme: PC Alignment software tool V1.02

---

The AnyTone PC Alignment (service mode) software tool for the AT-6666 PRO, is designed for the professional radio market. This tool is intended for use by qualified radio service providers only, and requires the use of radio test equipment.

In addition to providing access to the AT-6666 PRO alignment parameters, the software also enables users to READ and SAVE the alignment settings of the radio, allowing for the restoration of original factory settings.

Please note that each radio has unique factory alignment settings. It is not advised to transfer alignment files between different radios, as this will result in incorrect calibrations. A complete alignment is necessary to ensure proper operation.

To use the new PC Alignment (service mode) software tool, you should have the latest firmware updates loaded into the AT-6666 PRO.  
(V1.01 - QX6666P\_H\_V100\_20240920 or newer is required.)

PC cable required: Programming cable for ARES II, AT-5555 PLUS, AT-5555N II, AT-6666, AT-6666PRO.

PC Cable Driver required: CH341SER for the new cable version, or PL-2303 for the old cable version.
