Number sequence for facilities starts with one (1) at the dam and progresses counter-clockwise around the lake.

This map is intended primarily for general purpose use and to show the configuration of the lake. It is not intended to be a complete representation of all marinas, public use areas or natural and man made obstacles. Navigational aids are shown, in approximate locations for reference only. Depths and/or contour lines (when shown) are based on pre-impoundment survey data and are noted at normal pool elevation, but are subject to change when the lake level fluctuates. Any information shown relating to access areas (public, private, or marina) should be used as a guide only to possible services provided, and is neither an advertisement for, or endorsement of, the establishment or park. Kingfisher Maps, Inc. expressly disclaims all liability for damages resulting from total reliance on this map or the representations hereon.

CAUTION

Lake contours are from 1960's surveys and buoy locations are approximate and are shown for information only. All elevations shown are feature above 330' MSL (full pool elevation), and are the highest stumps, trees, rocks, etc. not shown can be hazardous, especially when water level is low.

Safe boating is no accident

Some of the more important features. The distinguishing characteristic of a topographic map is the portrayal of the shape and elevation of the land.

Topographic maps record physical details of the terrain both above and below the water. These maps show the location and shape of hills, valleys, streams, rivers, trees, forests, houses and roadways.

The combined use of a depth finder and an accurate map showing bottom contours or structure is essential for catching large fish. Logerwoch bass are certain to be attracted to one or more of the following areas:

1. A group of standing timber or it runs along an old stream bed.
2. A point where a feeder channel runs close by - fish will hold in the channel itself.
3. Bridge, cemeteries, which stand near deep water or old river channel.
4. An underwater hilltop or sunken island near deep water.
5. A lake island - fish hold on the current side.

A good map and the knowledge of how to interpret it will greatly increase your chances of landing fish.

LAKE NAVIGATION AID AND MARKER SYSTEM

PORT SIDE (Keep Buoy to Your Port When Entering From Seaward)

STARBOARD SIDE (Keep Buoy to Your Starboard When Entering From Seaward)

MIDCHANNEL

JUNCTION BUOY

DIVER IN WATER (Keep Clear 25 Yards)

WARNING BUOY (Do Not Pass Between Buoy and Nearest Shore)

CONTROLLED AREA (Speed Limit, Zoning, No Swimming, Fishing Only, Etc.)

DANGER (Rock, Reef, Snag, Cable, Etc.)

BOATS KEEP OUT (Dam, Spillway, Water Skiing, Swimming Area, Etc.)

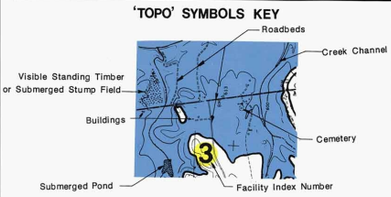
INFORMATION SIGNS (Public Boat Ramp, Public Marina, Directional Information, Etc.)

FISH CONCENTRATION

NOTES:

1. Buoys are aids to navigation for your assistance and information only. Exercise caution in whatever area and approaching shorelines.
2. When proceeding upstream, red buoys mark the starboard (right) side of channels, or the location of obstructions which must be passed by keeping the buoys on the starboard (right) side.
3. When proceeding upstream, black buoys mark the port (left) side of channels, or the location of obstructions which must be passed by keeping the buoys on the port (left) side.
4. Blind and safe vertical striped midchannel buoys mark the centerlines of streams. Pass close on either side.
5. Red and black horizontal striped junction buoys mark the intersections of streams. Pass on either side.

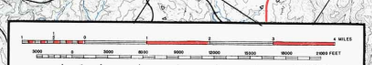
'TOPO' SYMBOLS KEY



To determine the depth, subtract the elevation figure found in the lake from the normal pool elevation (330'). Each elevation figure is graduated at 20 ft. per line.

CLARKS HILL LAKE

LENGTH	39 Miles
SHORELINE	1200 Miles
POWER POOL ELEV.	330 ft. above MSL
AREA AT TOP OF POWER POOL ELEV.	70,000 Acres
DAM HEIGHT	200 Ft.
DAM LENGTH	5,680 Ft.
NO. OF TURBINE GENERATORS	7
TOTAL AVE. ANNUAL OUTPUT	700 Million KWH



Waterproof Contour Lake Map Number 305
