LAKE BOTTOM LEGEND

This map is intended primarily for general purpose use and to show configuration of the lake, it is not intended to be a complete representation of the marinas, public use areas, or natural areas. Navigational aids and obstructions are shown in approximate locations for reference only. Depth soundings (lines when shown) are based on pre-impoundment survey data and are noted normal pool elevation, but are subject to change when the lake level fluctuates. Any information shown relating to access areas (public, private, or marina) should be used as a guide only to possible services provided, and is neither a commitment for, or endorsement of, the establishment or park. Kingfisher Map Co. does not assume any liability for damages resulting from reliance on this map or the representations provided.

Interpretation of a lake bottom from a contour map is based on the spread of the contour intervals. The closer together these lines are the faster the slope. At the extremes, lines directly on top of each other indicate a straight drop or bluff, while the absence of lines, (or lines that are widely spread) indicate a relatively flat area. The contour intervals may vary from 25 feet to as much as 80 feet depending on the prevailing geographical conditions and the practicality of interpretation. The contour lines may be marked as the number of feet above sea-level, or as the actual depths when the lake is at maximum power pool. When actual depth designations are used, the true depth must be adjusted by the current variation of the lake level from the maximum power pool elevation.
