AUTHORITIES
Hydrography and topography by the National Ocean Service, Coast Survey, with additional data from the Corps of Engineers, Geological Survey, and U. S. Coast Guard.

HURRICANES AND TROPICAL STORMS

Hurricanes, tropical storms and other major storms may cause considerable damage to marine structures, adds to navigation and mooring hazards, and may result in unknown losses.

Channel shoaling, channel depths and shoreline may not reflect actual conditions following these storms. Buoys aids to navigation may have been damaged or destroyed. Flooded areas may have been moved from their original locations, parks, extinguished or otherwise made impervious. Mariners should not rely upon the position or operation of an aid to navigation. Wrecks and submerged structures may be exposed or dislodged from charred locations. Pipelines may have become uncovered or moved.

Mariners are urged to exercise extreme caution and are requested to report aids to navigation discrepancies and hazards encountered in the nearest United States Coast Guard Liaison Office.

CAUTION

Numerous bridges and overhead cables cross the waterways of this area. Some are not shown on this chart because of the low clearance.

See larger scale charts and U.S. Coast Pilot 5.

HORIZONTAL DATUM
The horizontal reference datum of this chart is North American Datum of 1983 (NAD 83), which for charting purposes is considered equivalent to the World System of 1984 (WGS 84). Geographic positions referred to the North American Datum of 1927 do not require conversion to NAD 83 for plotting on this chart.
