## **Point Elrington to East Chugach Island**NOAA Chart 16680

A reduced-scale NOAA nautical chart for small boaters When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA's Office of Coast Survey, the nation's chartmaker

#### What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America's commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

#### What is a BookletChart<sup>™</sup>?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at <a href="http://www.NauticalCharts.NOAA.gov">http://www.NauticalCharts.NOAA.gov</a>.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

#### **Notice to Mariners Correction Status**

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at <a href="http://www.nauticalcharts.noaa.gov/nsd/coastpilot/w.php?book=9">http://www.nauticalcharts.noaa.gov/nsd/coastpilot/w.php?book=9</a>.

(Selected Excerpts from Coast Pilot)
The W entrance of Prince William Sound
between Cape Cleare and Cape Puget is
divided into a number of passages between
the islands. They are described in the
following order: Montague Strait, Latouche
Passage, Elrington Passage, Prince of Wales
Passage, Bainbridge passage, and Knight
Island Passage.

**Latouche Passage** has its seaward entrance between Danger Island and Elrington Island. The entrance bar, with depths of 3.3 to 9.0

fathoms, has sometimes been crossed by large vessels proceeding W from Latouche. The recommended route, however is by way of Erlington Passage and the N part of Latouche Passage. Numerous submerged rocks and shoals with depths from 3.0

Elrington Island, high and mountainous, is between Latouche Passage and Elrington Passage. The SW end of the island has three prominent points between which are South Twin Bay and North Twin Bay.

Elrington Passage, W of Elrington Island, is generally used by vessels proceeding between Prince William Sound and points to the W. It is 8 miles long, 0.5 to 1 mile wide, deep and clear. Anchorage is not easily found because of the great depths. The passage is well marked.

Point Elrington, the SW end of the island, is a small hill, high and wooded, with cliffs at the water, and is joined to the island by a sand and gravel neck just above high water. A hill, 1,060 feet high, 1.4 miles E of the point, has a low divide about 100 feet high at the E end,

separating it from the main island. **Point Elrington Light** (59°56'09"N., 148°15'02"W.), 30 feet (9.1 m) above the water and shown from a skeleton tower with a red and white diamond-shaped daymark, marks the extremity of the point. **Procession Rocks**, 4.3 miles N of Point Elrington Light, are a group of small islets and jagged rocks, the highest rising to about 70 feet. There are twelve principal islets, with a number of smaller rocks and reefs surrounding them. Deep water extends close up to the rocks. Barren Islands, a group of mountainous islands in the middle of the entrance to Cook Inlet between Chugach Islands and Shuyak Island, occupy an area about 13 miles long and 5 miles wide. East and West Amatuli Islands are bold and precipitous and mostly devoid of trees. They are thickly covered with grass in the depressions and on the less precipitous slopes. In general, the anchorages around Ushagat Island are preferable to the others in the group, however, all are insecure, because they are subject to sudden changes in wind speeds and directions. Chugach Islands consist of mountainous East Chugach, Perl, and Elizabeth Islands near the coast of Kenai Peninsula at the entrance to Cook Inlet.

East Chugach Island has a low valley through the middle in a NE and SW direction. The S peak is 1,400 feet high, and the peak near the W end is higher. The SE point of the island is a cliff with a 710-foot peak at its crest and slightly lower land between it and the mountains. The point is marked by East Chugach Light (59°06'23"N., 151°26'37"W.), 325 feet (99.0 m) above the water, and shown from a skeleton tower with a diamond-shaped red and white daymark on the SE end of the island. Chugach Passage is between Perl and Elizabeth Islands and the rounded end of the mainland. A lighted buoy marks the NE side of the S turn and SW side of the N turn in the passage channel, respectively. The end of the mainland is fringed with reefs, isolated rocks, and extensive kelp beds. In rounding it from the E, the outermost danger is a rock, bare at half tide, 0.4 mile off the S side of the rounding mainland shore. Windy Bay, just W of Rocky Bay, extends 3.5 miles W and is 440 yards wide near its head. Though the bay has a good holding mud bottom in 4½ to 8 fathoms near the head, it is not recommended as a desirable anchorage because of heavy swell during SE weather and a strong W breeze that draws through the bay. Boats entering this bay should favor the S side, keeping about 440 yards offshore when N of the S entrance

Chugach Bay, the large bay S of Windy Bay, has a N bight with deep water close inshore, and a W arm, 2 miles long, with good holding mud bottom. The W arm anchorage is not recommended for small boats because of its exposure to E weather and the strong W breeze that draws through the anchorage. The bottom in the S half of the entrance is broken, with a rocky spot covered 1½ fathoms.

#### VHF Marine Radio channels for use on the waterways:

**Channel 6** – Inter-ship safety communications.

Channel 9 – Communications between boats and ship-to-coast.

Channel 13 – Navigation purposes at bridges, locks, and harbors.

**Channel 16** – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other

vessels. Contact the other vessel, agree to another channel, and then switch.

Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here. Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

**Getting and Giving Help** — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

#### **Distress Call Procedures**

- Make sure radio is on.
- Select Channel 16.
- Press/Hold the transmit button.
- Clearly say: "MAYDAY, MAYDAY, MAYDAY."
- Also give: Vessel Name and/or Description; Position and/or Location; Nature of

Emergency; Number of People on Board.

- · Release transmit button.
- Wait for 10 seconds If no response Repeat MAYDAY call.

HAVE ALL PERSONS PUT ON LIFE JACKETS!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
